SOUND BLASTER

TETRA COMPOSITOR

Music Construction Set and Recording Studio for the PC

Tetra Compositor is designed for the desktop musician who wants to create super musical scores—from big band to funky new wave and everything in-between. However, you don't have to be a musician or even a computer expert to use Tetra Compositor. With a little practice and some imagination you can quickly learn to compose your own music.

Tetra Compositor uses Sound Blaster to record and play samples—the building blocks for your compositions. It has a unique way of transforming any voice or sound sample into an instrument which can be placed in any part of a sequence—a feature that sets it apart from other sequencer software. The number of instruments you have is limited only by your PC's storage capacity. You can record, retrieve, edit and create special effects with Tetra Compositor's sampler editor and easily insert them into your compositions. The four-channel system can play multiple sounds making it as good as most 16 channel systems.

Features:

- Easy to use software and Microsoft Mouse compatible Sampler Editor
- Four channels with 64 time slots to create and play a complex song with up to 128 patterns
- Individual control over each channel
- Read, play and edit SD4 to NST and MOD (Amiga) formats without conversion.
- Record up to 16 seconds for each sound sample
- Transforms sound samples into instruments
- Supports Sound Blaster Pro for stereo sound and 23KHz sample recording
- Unique Sampler Editor can copy, cut, mix, swap sound and create other special effect
- Tetra Compositor's easy to read and use manual gives you all the information you need to create compositions from included samples or from scratch.
